

Get the sugar advantage with AgroLiquid nutrition!

Sugarbeet Nitrogen Source
North Central Research Station - 2014

Using High NRG-N from *Agro-Culture Liquid Fertilizers* will enable a lower use rate yet higher % sugar.

High NRG-N is a unique nitrogen source that feeds Nitrogen soon after application and into the growing season. With sulfur built into the formulation, the result is higher nutrient efficiency, excellent tonnage and high sugar yields.

Target N Rate: 120 lbs/A. But 30% lower application volume with **High NRG-N** and much higher sugar produced. Quality that pays!
