

Still Time To Apply Nutrients To Winter Wheat!

Winter Wheat Fertilizer Method of Application Comparison: 3 Year Avg.
North Central Research Station - 2010-2012

2010: 2 gal Pro-Germ. + 4 gal Sure-K + 2 qt Micro 500
 2011: 4 gal Pro-Germ. + 2 qt Micro 500
 2012: 4.25 gal Pro-Germ. + 2 qt Micro 500 + 2 gal accessS
 - All treatments topdressed with 28 gal High NRG-N

Every nutrient needed, according to a soil test, can be important to the final yield of a crop. There is still time to apply AgroLiquid nutrition to winter wheat.

A three year study showed similar results between application methods and timings.

Apply Pro-Germinator, Sure-K, Micro 500 or other nutrients to meet the crops needs!
