

A Little *LIQUID* Goes a Long Way For Top Corn Yield

Fertilizer Program Comparisons in Corn
North Central Research Station - 2011

JLW219120BPI

Fertilizer programs were based on a soil test recommendation of 180-30-60-2 zinc. The two conventional programs did that for a total of 270 lb/A of primary nutrients. The LIQUID program was easier, and only applied 157.5 lb/A, or 58%. *But look at the yields!* Let *LIQUID* replace conventional fertilizers in your corn and be on your way to top yields and easier application.
