

ferti-Rain is the foliar formula for high yielding broccoli

ferti-Rain added to the ACLF base fertility program resulted in increased head size and advanced maturity in the early harvest period and an overall increase in yield by 26% over the ACLF base program. Growers interested in higher yields and/or in higher early market yields, may see benefit.

- ☐ Conventional: 160#/a N, 48#/a P₂O₅, 86#/a K₂O as preplant (18-46-0,0-0-60), transplant (10-34-0), sidedress (28%UAN).
- ☐ ACLF Base: 32 gal/a High NRG-N at sidedress, 3.7 gal/a Pro-Germinator at transplant, 6.6 gal/a Sure-K at sidedress & transplant.
- ☐ ferti-Rain was applied as foliar 3 times weekly at 2 qt/a starting after head development.
