

LIQUID Fertilizer Component Effect on Corn Yield

North Central Research Station - 2012

Step one for building the nutrient inputs for your corn fertility program is following the recommendations from the soil test. AgroLiquid has the all of the essential nutrients needed for top yield. The contributions of each component are seen in this experiment.

Soil test

pH: 7.0, Bicarb P: 17 ppm, K: 111 ppm (2.3% base. Sat.)

Recommendation for 170 bu/A: 175-30-60-2Zn
